

# SnoopySec Announces New DevSecOps Tooling to Enhance Security in Development and Operations

**SnoopySec, a leading provider of cybersecurity solutions, is proud to announce the release of its latest DevSecOps tooling.**

---

**The new tools are designed to improve security in development and operations, providing teams with greater visibility, control, and automation to reduce the risk of security vulnerabilities.**

---

Our new DevSecOps tools leverage the latest advances in technology and integrate seamlessly into existing development workflows, enabling teams to detect and address security issues early in the development process. This approach enables teams to address security vulnerabilities before they become costly and time-consuming problems.

"SnoopySec's new DevSecOps tooling marks a significant milestone in our commitment to delivering the best cybersecurity solutions to our customers," said Charles Schultz, CEO of SnoopySec. "By leveraging the latest technology, our new tools will help our customers reduce the risk of security vulnerabilities and streamline their development workflows, resulting in faster and more secure software releases."

## Key features of the new DevSecOps tooling include:

- Automated security testing: Integration with popular testing frameworks to enable automated security testing.
- Vulnerability scanning: Automatic scanning of code repositories to identify and prioritize security vulnerabilities.
- Threat modeling: Integration with threat modeling tools to provide a holistic view of security risks.
- Continuous monitoring: Ongoing monitoring of applications in production to detect and respond to security incidents.

The new DevSecOps tooling builds on SnoopySec's legacy of providing cutting-edge cybersecurity solutions to customers across various industries. By enabling teams to

build security into their development workflows, SnoopySec is helping to create a more secure and resilient digital environment.
